

I oppose any changes to current Net Neutrality. No private corporation should be given the right to control or charge money for 1) differential access to the internet, 2) differential speed of the internet among users, or 3) differential content or control of content. The internet was established using the DARPA (Defense Advanced Research Projects Agency) network—publicly financed and publicly owned. Internet content is created by billions of users and does not belong to private corporations, namely AT&T, Verizon, or Comcast.
